Introduction

Welcome to QTrak!

QTrak is an internal logistics software designed to help track packages, letter mail, inventory and much more. QTrak boasts virtually limitless customization and can be tailored to meet your specific needs.

About this guide

This guide is written and designed for QTrak end-users. Since QTrak has a high level of customizability, this guide will cover only the basic functionalities and usage of both the web portal and mobile application. This guide is designed to be as simple to understand and user-friendly as possible. Please let the Customer Success Team know if you run into any issues using the guide or understanding the content within it!

Contacting QTrak

If you have any questions that are not covered in this guide, you may contact QTrak's Customer Success department at success@qtrak.net or +1 (877) 787-2511. The Success Team is available Monday-Friday from 8:30AM to 5:00PM EST.

Glossary

Below are common terms used with QTrak, in alphabetical order.

- **Advanced Reports Portal** - The enhanced reporting interface that supports larger datasets, longer date ranges, archived data, and advanced filtering.
- **Archived Data** - Older package information that has been moved out of the active package view but remains available through reports.
- **Attempted** - A delivery attempt was made but the package was not successfully delivered.
- **Contact** - A person, department, building, mailbox, or other recipient that can receive packages or mail in QTrak. Contacts do not necessarily have access to QTrak.
- **Contact Group** - A collection of contacts that can be selected as a single recipient when processing packages.
- **Deliver** - To complete the transfer of a package to its recipient.
- **Delivered** - A package has been successfully delivered to the recipient or designated location.
- **Quick Deliver** - A mobile app function that delivers all undelivered packages and mail for a selected recipient at once.
- **Receive** - To enter a package into QTrak without assigning it to a recipient.
- **Received** - A package has been entered into QTrak but has not yet been assigned to a recipient.
- **Route** - To assign a package to a recipient and make it available for delivery or pickup.
- **Routed** - A package has been assigned to a specific recipient.
- **Scanner Operator** - A user role with mobile scanning capabilities and report access but limited administrative permissions.
- **Searcher** - A read-only role with access to package searches and reports through the web portal.
- **Standard Reports Portal** - The basic reporting interface intended for smaller datasets and shorter date ranges.
- **Stored** - A package has been placed in a smart locker for pickup.
- **Supervisor** - The highest permission level in QTrak with access to administration, settings, users, contacts, reports, and mobile functions.
- **Transaction** - Any action performed on a package, such as receiving, routing, storing, attempting delivery, or delivering.
- **User** - A person who can log in to and use the QTrak web portal or mobile application.

How to Use This Guide

This guide aims to be as accessible and as easy to read and understand as possible. To that end, it is divided into four main sections, with their own individual headings and miniature tables of contents. Clicking on any hyperlink will take you directly to that section. You can also use CTRL+F to search for specific terms.

Getting Started

This section of the guide will help walk you through the necessary steps to get your QTrak system ready for use!

Note: Some or all of this may have been handled by the QTrak Success Team beforehand, in which case feel free to skip ahead!

In this section:

- [Users & Roles](#)
- [Logging In](#)
- [Changing Your Password](#)
- [Adding Users & Contacts](#)
- [Account Settings](#)

Users & Roles

Access to QTrak is determined by User Roles. This is split into 3 levels, **Supervisor**, **Scanner Operator** and **Searcher**, with Supervisor having the *highest* level of permissions and Searcher having the *lowest*.

Role	Manage Users/Contacts	Manage/Search Package Data	Manage Account Settings	Run Reports	Use Mobile App
Supervisor	Y	Y	Y	Y	Y
Scanner Operator	N	Search Only	N	Y	Y
Searchers	N	Search Only	N	Y	N

The breakdown of permissions per role is as follows:

Supervisor (Level 1):

- **Full** access to the system on both web and mobile
 - **Can** manage users/contacts
 - **Can** manage package data/search for package information
 - **Can** manage account settings
 - **Can** run reports
 - **Has full use** of the mobile application

Scanner Operator (Level 2):

- **Limited** access to the system on both web and mobile
 - **Cannot** manage users/contacts
 - **Cannot** manage package data
 - **Cannot** manage account settings
 - **Can** run reports
 - **Can** search for package information
 - **Has full use** of the mobile application

Searcher (Level 3):

- Has **Read Only** access to the web portal
 - **Cannot** manage users/contacts
 - **Cannot** manage package data
 - **Cannot** manage account settings
 - **Can** run reports
 - **Can** search for package information
 - **Cannot** use the mobile application

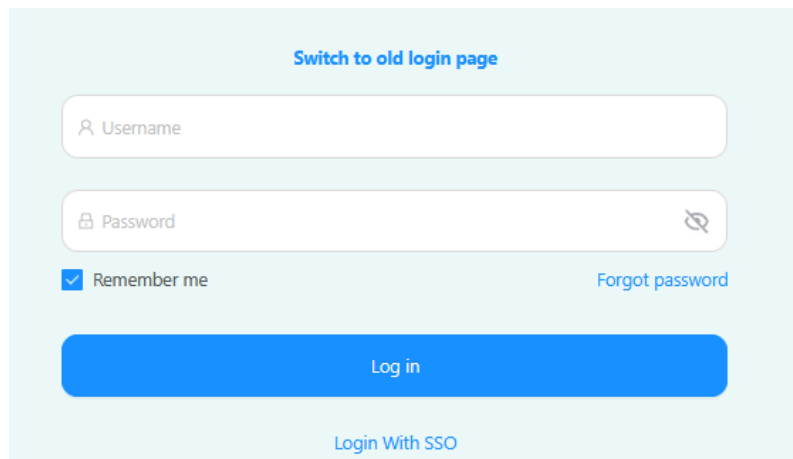

Logging In

The same credentials are used to log in to both the web portal and the mobile application. Please note that the **Searcher** role does not have access to the mobile application, and therefore will not be able to log in to it.

*Note: The username and password are both **case-sensitive**. Please make sure your username is entered in all lowercase letters.*

On the web portal

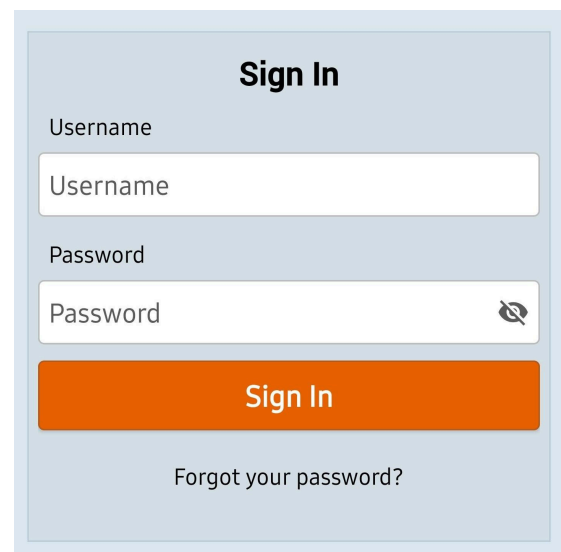

1. Navigate to <https://v2.qtrak.net/login>.
2. If you are using a standard username and password, enter them into the appropriate form fields.
3. If you would like for the system to remember your credentials for the future, check the "Remember me" box under the password field. *We do not recommend checking this option on shared/public computers.*
4. Click the "Log In" button.
 - a. If you are using an SSO (Single-Sign On) log in, please click the "Login With SSO" link underneath the standard "Log In" button.
 - b. You will be redirected to the SSO log in landing page.
 - c. Enter your email to be redirected to your organization's SSO portal.

The image shows a web portal login interface. At the top, there is a link "Switch to old login page". Below it are two input fields: "Username" and "Password". The "Password" field has a toggle icon on the right. Below the "Password" field is a checkbox labeled "Remember me" which is checked, and a link "Forgot password". A large blue button labeled "Log in" is centered below the form fields. At the bottom, there is a link "Login With SSO".

On the mobile app

1. Once the app has been installed ([Installing the QTrak Mobile App](#)), launch it.
2. If you are using a standard username and password, enter them into the appropriate form fields.
 - a. If you are using an SSO (Single-Sign On) log in, and mobile SSO is enabled, please tap the "SSO Login" option beneath the standard "Sign In" button.

The image shows a mobile app sign-in screen. The title "Sign In" is at the top. Below it are two input fields: "Username" and "Password". The "Password" field has a toggle icon on the right. Below the "Password" field is a large orange button labeled "Sign In". At the bottom, there is a link "Forgot your password?".

- b. You will be redirected to the SSO log in landing page.
- c. Please enter your email to be redirected to your organization's SSO portal.

Changing Your Password

1. To change or reset your password, click the "Forgot password" link on the log in page for the web portal or "Forgot your password?" on the mobile app.
2. You will be redirected to a verification screen. Enter your email (it is the same as your username) then click "Submit" to send a verification code to the email address you entered.
3. Enter the code on the next screen.
4. Create and confirm your new password.
 - a. Your password must be *at least* 8 characters long, and contain 1 capital letter, 1 lowercase letter, 1 number, and 1 special character (*valid special characters are !, @, \$, %, and &*).

Adding Users & Contacts

Users are defined as people who will have access to and be using the QTrak web portal and/or mobile app (like mailroom staff); **contacts** are people, buildings, or departments, etc. to whom mail and packages are routed and delivered (like students and staff or an individual office building or department). Adding both to QTrak is a simple process.

Add Users

Note: Currently, users must be added to the system individually. If you have a large number of users that need to be added, please contact the QTrak Customer Success Team.

1. Navigate to the "Users" tab on the top toolbar of the QTrak web portal.
2. Hover over the 3 dots next to the "User Mgmt" button to open a dropdown menu.
3. Click "Add Users" to open a pop-up dialog box.
4. Enter the required fields (denoted by a red asterisk *****) then click "Create User."

Add Contacts

Contacts can be added to QTrak in multiple ways; manually, via a CSV spreadsheet import, or via an automatic API.

Adding Contacts Manually

1. Hover over the "Contacts" option on the top toolbar of the QTrak web portal to open a dropdown menu and click "Contacts" from the available options.
2. Hover over the 3 dots next to the "Contacts Mgmt" button to open a dropdown menu.
3. Click "Add Contact" to open a pop-up dialog box.
4. Enter the required and any additional information and click "Create" (required fields are denoted by a red asterisk *).

Adding Contacts via Spreadsheet

Note: Please ensure the file you are using is in CSV UTF-8 (Comma delimited) or .csv format. You can change the file format of a spreadsheet or workbook by using the "Save As" option in Excel and saving as .csv.

1. Hover over the "Contacts" option on the top toolbar of the QTrak web portal to open a dropdown menu and click "Contacts" from the available options.
2. Hover over the 3 dots next to the "Contacts Mgmt" button to open a dropdown menu.
3. Click "Import CSV" to open a pop-up dialog box.
4. Map each individual contact field to the associated header in your CSV file (eg. map the column labelled **First Name** in the CSV file to the "First Name" dropdown in QTrak).
5. To add new entries to an existing database, select the "Append to contacts" button at the bottom of the form.
6. To completely overwrite the existing database, select the "Overwrite contacts" button at the bottom of the form.
 - a. *Note: This will **completely wipe** the existing database and replace it with the data in the spreadsheet. It is **highly recommended** to make a backup of your database before making any changes. You can do this by hovering over the 3 dots next to the "Contacts Mgmt" button and clicking on "Export CSV."*
7. Click "Upload."
8. The upload will process in the background. Refresh the page to see the changes.
 - a. *Note: You can view the upload logs in the Account Settings.*

Adding Contacts via API

If you wish to use an API to automatically update and maintain your contacts database, please reach out to the QTrak Customer Success Team to get the process started. The appropriate party (like internal IT) will be provided with the appropriate documentation.

*Please remember that only **Supervisors** have the ability to access and edit the Users and Contacts lists.*

Account Settings

*Note: These settings are available to **Supervisors** only.*

To access your account settings, hover over your name on the toolbar at the top of the QTrak web portal to open a dropdown menu and click "Settings" from the available options. This will open the main Account Settings page.

Main Settings

Barcode Printer Settings

This controls the basic settings for printing labels from the web portal using DYMO brand label printers. Here, you can enable or disable web printing, and select the correct size label. The **Custom Large Shipping Label** and **Large Shipping Label** options are what QTrak uses by default.

Scanner Settings

Here you can change what scanning mode you would like to be the default when opening and using the QTrak mobile application. *We highly recommend leaving Carrier as the default to prevent scanning invalid tracking numbers.*

Notification Settings

This section controls package and mail SMS and email notifications. By default the "Send notification emails from" section will be blank. We recommend setting it to noreply@qtrak.net.

Note: If you want to use an email/domain from your organization and experience issues with email notifications being sent out, please contact the QTrak Customer Success Team for assistance.

There are four base types of notifications: Routing, Delivery, Letter Mail and Stored. The Routing and Stored notifications both also have separate reminder notifications.

- **After Routing/Reminder** - this notification is sent after a package(s) has been "Routed" to a recipient, and alerts them that they have a package(s) available for pickup. It includes the package information.
- **Attempted Delivery** - this notification lets the recipient know that an attempt was made to deliver their package(s).
- **Successful Delivery** - this notification lets the recipient know that their package(s) have been successfully delivered, either directly to a person or at the designated location
- **Letter Mail** - this notification is sent when letter mail has been deposited for the recipient using QTrak's Variable Mail system
- **Package Stored/Reminder** - this notification is sent after a package(s) has been stored to a recipient in QTrak's smart lockers. It contains the package information as well as the locker bank and number as well as the access code.

To enable a notification, click on its name to open its details. Select the "Enable Notifications" button underneath the subject text box, then click "Update." If you would also like to send text message notifications, select the "Enable SMS for this notification" button.

You may customize the email notification header/body text and SMS message however you wish. However, the SMS message must be no longer than 120 characters.

Note: Recipients must have a valid email address/phone number attached to their contact information in order to receive notifications.

Note: After making changes to anything on this page, all mobile app users must log out of and back into the application for the new settings to apply.

Additional Settings

Email Header Settings

Email Headers can be created and set to send specific notifications to specific recipients according to set parameters, such as their location, email or mailbox. The message set will appear at the top of the regular email notification for the associated transaction type.

To create a new Email Header:

1. Hover over the 3 dots next to "Email Header Settings" to open a dropdown menu.
2. Click "Add New Email Header" to open a pop-up dialog box.
3. Choose the "Contact Field"; for example, "location1." This determines which field the system will look for to send the modified email notification.
4. Choose the "Contact Field Value." This is the value that the system will look for in the specified contact field; for example, the value "Office" for the contact field "location1."
 - a. Please note that the value must be exact, including capitalization. "Office" and "office" will be read as two different values by the system.
5. Set what you would like your message to say. Think of each HeaderLine as a new paragraph.
6. Click "Update."
7. This updated message will now be sent as a header at the top of all email notifications sent to recipients who meet the set parameters; in our example, everyone with "Office" in their "location1" field in their contact information will receive this message.

Transaction Type Settings

This section is where additional transaction types, such as "inbound" or "outbound" can be added to provide additional information for a package.

To add a new transaction type:

1. Hover over the 3 dots next "Transaction Type Settings" to open a dropdown menu.
2. Click "Add New" to open a pop-up dialog box.
3. Enter the name for the new transaction type.
4. Click "Create."

Notes Settings

This section can be used to manage any notes that have been saved to the system through either the mobile app or the web portal. Notes can be added, edited and deleted. Deleting notes will stop them from showing as an auto-fill option when typing in the "Notes" field on either the mobile app or web portal.

Contact Import Logs

This section displays a history of all spreadsheet uploads for your organization, whether done manually or via an API. It shows your unique organization ID, the name of the file that was imported, the time the file was imported, how many rows of data were processed, the size of the file, if the file appended existing data or overwrote it, the process by which it was uploaded (for example, via a manual web upload or a Powershell script), and who processed the upload.

You should now be set up and ready to use QTrak! The next sections will go over the details of the web portal and mobile application and how to use them.

Logging Out

To log out of the QTrak web portal, hover over your username on the toolbar at the top of the portal to open a dropdown menu and select "Logout." To log out of the mobile application, tap the button in the upper right corner of the Home screen.

QTrak Web Portal

The QTrak web portal is the main hub for the software, where users can not only route and deliver packages, but also maintain the user and contact databases, run reports, look at detailed package information and history and adjust any settings.

In this section:

- [Web Browser Requirements](#)
- [Using QTrak's Web Portal](#)
 - [Users](#)
 - [Contacts](#)
 - [Reports](#)
 - [Routing](#)
 - [Delivery](#)
 - [Packages](#)
 - [Menu](#)

Web Browser Requirements

We recommend using the latest version of one of the following browsers:

- [Google Chrome](#)
- [Mozilla Firefox](#)
- [Apple Safari](#) (the default browser for Mac systems)
- [Microsoft Edge](#) (the default browser for Windows systems)

QTrak aims to be as compatible as possible, but cannot promise complete functionality when using unsupported browsers.

Using QTrak's Web Portal

By default, using QTrak's most basic workflow, the following tabs will be available at the toolbar on the top of the webpage. The tabs you see may be different depending on your organization's individual workflow (for example, you may see "Z-Routing" instead of "Routing" if you are using a Zebra label printer, or "Variable Mail" if you are using QTrak's variable mail system).

Note: Not all users may be able to see all tabs, depending on their set role.

- Users
- Contacts
- Reports
- Routing
- Delivery
- Packages
- Menu (under the user's name)

This guide will address these tabs in order from left to right.

Users

This tab displays all users added to the QTrak system. Here, **Supervisors** can Add, Edit and Delete users. Please refer back to the [Add Users](#) section for instructions on how to add users.

This tab displays the user's full name, their username and email (which are the same), their password status (most will say "Confirmed") and their role.

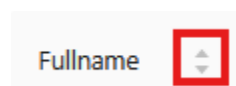

Clicking "Edit" on a user's row will allow you to edit their name and role. Clicking "Delete" will delete them from the system and remove their access to QTrak.

Note: Currently, the only way to reset a user's password from the Users menu is to delete the user and re-add them. If you are uncomfortable doing so, you may reach out to Qtrak's Success Team for assistance.

Contacts

This tab displays all contacts added to the QTrak system. Here, **Supervisors** can add/import/export contacts and view detailed contact information. What information is displayed will depend on what has been imported into the system. By default, the contacts are sorted alphabetically by first name. You can change this by clicking on the up or down arrows at the right end of each column.

Please refer back to the [Add](#) on how to add contacts.

[Contacts](#) section for instructions

The default fields that are available/shown are:

- **Fullname** - this field combines the first and last name values for the contact.
- **Phone** - this field is for the contact's primary number, and is required to send SMS notifications.
- **Email** - this field is for the contact's primary email address, and is required to send email notifications.
- **2nd Phone** - this field is for a secondary phone number, such as a cell phone or office number.
- **Contact ID** - this field is for unique identifying information like student or employee badge or ID numbers.
- **Mailbox** - this field is for unique identifying information like a student's mailbox number.
- **Forward Address** - this field will show the contact's designated forwarding address, and is required to print mail forwarding labels.
- **Locations 1, 2 and 3** - these fields can be used for any additional useful information, such as dorm number, department, or office building. Additional fields are available upon request.
- **ADA** - this field designates whether or not a contact requires ADA accommodations, such as lower lockers.

Clicking "Edit" on a contact's row will allow edits of all available fields. Clicking "delete" will remove them from the system. Users will not be able to route new packages to them, but existing package data will **not** be edited or deleted.

Note: When importing a spreadsheet manually or via an API, any manual changes made will be overwritten unless those same changes have been made to the contact in the file that is being uploaded.

Contact Groups

Contact groups can be used to group together existing individual contacts (for example in a specific building or department). The group (eg. Admissions) can then be selected as the recipient when processing packages. If the appropriate notifications are enabled, everyone in the selected contact group will receive a notification for the package.

Reports

QTrak has a plethora of different types of reports that can be generated and exported as an Excel file. When hovering over "Reports" on the toolbar, you will be shown a dropdown

with two options: "Standard" and "Advanced" reports. Depending on your needs, one portal may be more suitable than the other for generating your reports. The different types of reports will be covered later in this guide.

Standard

The Standard reports portal is QTrak's basic reporting tool, capable of handling approximately two months of data. The Standard portal also displays a summary of the generated report that can also be exported to Excel. The different fields are as follows:

- **Type of Report** - this dropdown shows the selection of reports QTrak offers.
- **Item** - this dropdown lets you choose what "item" or carrier you want to run the report for. You can choose "All" for every carrier, including custom items, or select an individual one (eg. FedEx).
- **Start Date** - this determines what date you want the report to start at.
- **End Date** - this determines what date you want the report to end at.
- **Transaction Type** - this dropdown lets you choose what transaction type you want to run the report for. You can choose "All" for every type, or select an individual one (eg. routed).
- **Location** - this is an option field that allows you to run the report for a specific location, as determined by location fields in the Contacts tab.

To generate a report in the Standard portal:

1. Select the type of report you wish to generate from the dropdown menu.
2. Choose what items you wish to generate the report for.
3. Select the start date.
4. Select the end date.
5. Select the transaction type(s).
6. Type a location, if necessary.
7. Click download to export the report and download it to your computer as an Excel file.

If you find that a report will not generate in the Standard portal, try it in the Advanced, instead.

Advanced

QTrak's Advanced Reports Portal allows users to generate a wider range of reports for longer date ranges, as well as with more specific criteria. It also contains graphs that reflect specific data for the set date range, and is where archived package data is stored.

The main Dashboard shows four different graphs, one for each transaction type. You can set a custom date range, or choose to display by week, month or year. The graphs will update to reflect the set parameters. For example, choosing the "This Year" option will display all package data by month for the current year. Hovering the mouse cursor over the individual month will display the number of packages for that transaction for that month.

The Package Volume graph functions similarly, but shows the information for all transaction types on one chart. You can choose to see daily, monthly, or yearly data. For example, choosing "Monthly" will display a graph for the last six months, with a separate line for each transaction type. Hovering the mouse cursor over the individual months will display the number of packages for each transaction for that month.

The data for these graphs can be downloaded in report form by running the KPI report in the Advanced Reports Portal.

At the bottom of the portal, you will find the reports table with two tabs. The "Reports" tab will allow you to generate reports using the Advanced portal's stronger capabilities, as well as see the history of reports generated in the Advanced portal and their current status. You can also refresh the reports table and delete selected reports. The "Report Archives" will show auto-generated reports of archived package data by month.

There are a couple of new options in the Advanced portal:

- **Description** - this field allows you to enter a description for the report (for example, what it is being generated for).
- **Product Name** - this field is for use with our inventory or vending/asset pod workflows.
- **Undelivered Hours** - this field is for the set hours to search for undelivered packages.
- **Email** - this field is for the associated package email.

To generate a report in the Advanced portal:

1. Click on the plus button (+) in the upper right of the "Reports" tab. This will open a pop-up dialogue.
2. Select the type of report you wish to generate.
3. Provide an optional description of the report's purpose.
4. Select the item(s) you wish to generate the report for.
5. Enter the start date.
6. Enter the end date.
7. Select the transaction type(s).

8. Type a location, if necessary (this functions the same as the Standard portal).
9. Type a product name, if necessary.
10. Choose undelivered hours, if necessary.
11. Type an email, if necessary.
12. Click "Create."

The report will be added to the queue, and will display "IN-QUEUE" in the Status column. You can use the refresh button next to the plus button to refresh the table individually, or refresh the entire page. When the report has finished generating, its status will change to "Download." You can then click the link to download the report to your computer as an Excel file.

We will go over the individual reports in detail later in this guide.

Routing

The "Routing" tab is where users can route packages on the web portal. The default fields are:

- **Tracking number** - the unique identifier for the package.
- **To** - the package's recipient.
- **From** - who the package is from.
- **Notes** - this field can be used to enter any relevant notes about the package. Multiple notes may be entered, separated by a comma.
- **Additional Notes** - this field can be used to enter any additional notes about the package. Multiple notes may be entered, separated by a comma.

To route a package via the web portal:

1. Generate, manually enter, or scan (using a device like a USB hand scanner) the tracking number for the package you are routing in the first form field.
2. Enter the recipient for the package. You can manually type out the name/department/building/etc., or, if the recipient is a contact in your contacts database, select their name from the auto-fill dropdown that will appear when you begin to type. We highly recommend selecting the contact from the dropdown box to ensure accuracy.
3. Fill out who the package is from (optional)
4. Enter any relevant notes (optional)
5. Click "Route This Package"

By default, you will need to do the above steps for each individual package when routing from the web portal. On the mobile application, you can scan multiple packages per recipient at one time.

Delivery

The “Delivery” tab allows for packages to be delivered to their recipients via the web portal. When entering the tracking number for the requested package in the text box, the table below will populate with the details for the package. Type the recipient’s last name into the appropriate field, then click “Deliver Packages” to deliver out all entered packages.

If you enter a package by mistake or the recipient has decided to not take it with them, you may click the “Remove” button to remove the package from the queue. *This will only remove the package from the delivery queue; it will **not** delete it from the system.*

Packages

By default, when logging into QTrak, you will be redirected to the “Packages” tab. This is the main tab for QTrak, and contains the history of all packages processed using the software. On this page you can view the most recent 500 transactions, and packages up to two years old can be looked up. By default, the packages are sorted by most recently updated. You can change this by clicking on the up or down arrows at the right end of each column.

Note: Older transactions are still available, but are moved to an “archived” status, which we covered previously when talking about the Advanced Reports Portal.

At a glance, the Packages tab will display the following information for the most recent 10 transactions:

- **Date Received** - the date the package was received or updated.
- **Item** - the package carrier (eg. USPS).
- **Tracking Number** - the package’s tracking number.
- **From** - who the package is from, if this information was entered when the package was routed.
- **Routed To** - who the package was routed to.
- **Delivered To** - who the package was delivered to.
- **Status** - the package’s current status in the system.

Statuses Explained

QTrak has 5 main package statuses:

- **Received** - the package has been scanned into the QTrak system but not routed to a specific recipient
- **Routed** - the package has been routed to a specific recipient
- **Stored** - the package has been stored in a smart locker for a specific recipient
- **Attempted** - an attempt was made to deliver the package
- **Delivered** - the package was delivered successfully

For more detailed information on a particular package, you can click on its entry in the package data table. This will open up a detailed dropdown of the most recent transaction. Here, you can see who the package was last handled by and at what date and time, detailed information on the recipient based on what is attached to their contact in the database, and any notes for the package, as well as the status of the email notification, if they are being used. If using QTrak's smart locker system, it will also show the locker information including the bank name, locker number and access code.

The dropdown also shows a handful of utility options for that package:

- **Email This Info** - email the package transaction info to any email address.
- **Package PDF** - view a PDF summary of the package information.
- **View Photo** - view the most recent photo attached to the package.
- **Mark As Delivered** - mark the package as delivered.
- **Delete** - delete the package from the system.

To view the complete history of the package from start to finish, you can click on "View Complete Package History" to open a pop-up dialogue box that shows a history of every transaction attached to that tracking number.

In this window, you will also see the "Resend Email" option if you wish to resend the notification email to the recipient.

Editing Routed Package Notes

Supervisors have the ability to add/edit notes to/for a package after it has been entered into the system. To do so, find the package that needs to be edited and click on its entry in the data table, then click the "Edit Package" option on the right hand side. After making changes, click "Update" to save them.

Advanced Search

The Advanced Search function can be used to further control and filter the results displayed in the Packages table. The populated results can then optionally be downloaded as a CSV file. To run an Advanced Search:

1. Click on "Advanced Search" in the top left above the data table.
2. Set the filters/options for the search:
 - a. Transaction Type - the transaction type (eg. Routed)
 - b. Item - the carrier (eg. FedEx)
 - c. Search Item - the criteria you want to search by (eg. Routed To)
 - d. Start Date - the start date for the search
 - e. End Date - the end date for the search
 - f. Search Text - the specifics of what you want to search by (eg. John Smith)
3. If desired, tick the "Download the search results as CSV" to download an Excel file of the results
4. Click "Search."

The package data table results will populate according to the filters chosen and download a CSV file of those results if the appropriate option was checked.

Menu

When hovering over your username, a dropdown menu will appear showing different options depending on your role and your organization's settings. The default options are:

- **Settings** - takes you to the settings menu for QTrak.
- **Documentation** - opens the latest version of this user guide.
- **Logout** - logs you out of the system.

Reports Explained

QTrak has many different types of reports. This section of the user guide will break them down for better clarity. The reports are presented in alphabetical order, with reports that are only available in either the Standard or Advanced portals marked as such.

Note: This guide will only cover those reports which are available to all customers.

- **Daily Report** - This report displays a summary of all packages processed within a set date range by month/day.
- **Delivery Manifest Report** - This report can be used to bulk deliver out any currently undelivered packages within a certain date range, or to view a PDF of said packages.
- **Delivery Signature Report** - This is a PDF report of every delivered package and associated signature within a set date range.
 - *Note: Due to the image heavy nature and format of this report, it can only be generated for one day at a time, and must be generated from the Advanced Reports portal.*
- **Inventory Transaction Report** - This report displays transaction information for inventory items within a set date range.
- **KPI/Advanced KPI Report** - This report displays detailed logistics information for every package within a set date range, including total time from Routed to Delivered. The Advanced report shows the total time Received to Routed and Routed to Stored/Delivered.
- **Package Detail Report** - This report displays detailed package information for every package within a set date range.
- **Package Received Report** - This report displays package information for every package marked as "Received" within the set date range.
- **Package Report** - This report displays basic package information for every package within a set date range, including recipient, locker information and date information; the report shows only the latest transaction status for each package.
- **Package Stored Report** - This report displays package information for every package stored in a locker bank within the set date range, including the bank name and door number and access code.
- **Package Summary Report** - This report displays a summary of every package currently in the database by status, month and year.
- **Stale Locker Report** - This report displays all stored packages currently marked as "Stale" according to the number of hours set in the Settings menu.
- **Stale Mail Report** - This report displays a summary of all Variable/HD mail still in the system.

- **Transaction/Custom Transaction Report** - This report displays detailed transaction information for every package within a set date range, including who routed the package/who it was routed to, where the package was stored, dates and notes; this report shows information for every transaction status for each package.
- **Undelivered/Custom Undelivered** - This report displays all packages marked as "Received," "Routed," "Stored," or "Removed."
- **User Scan Report (Advanced)** - This report displays a package count by user for each status.
- **Variable Mail Summary Report** - This report displays the number of mail pieces deposited per day going back two years from the date the report is generated.

If you have any questions about the above reports or others that are not listed, please reach out to the QTrak Customer Success Team.

QTrak Mobile Application

The QTrak mobile application is a portable, user-friendly, simple way to scan packages without needing to be tethered to a computer, while offering the same customizability and functionality as the web portal. The two environments are connected, and designed to work together seamlessly.

In this section:

- [Installing the QTrak Mobile App](#)
- [App Device & Software Requirements](#)
- [Using the QTrak Mobile App](#)
 - [Home Screen](#)
 - [Receiving, Routing and Delivering Packages](#)

Installing the QTrak Mobile App

QTrak is available on both the Apple App Store and Google Play. Scan the below QR codes to install the app on your device. Alternatively, you can search for "QTrak" on either app store.

App Device & Software Requirements

While we try to keep QTrak as compatible with as many mobile devices as possible, we are still required to comply with Apple and Google's security and update requirements and schedules. See the below table for the minimum and recommended specifications for the QTrak app for iOS and Android devices.

iOS

Type	Minimum	Recommended
OS	11.0	12.0 or higher
Camera	8 MP	12 MP or higher
RAM	1 GB	2 GB or higher

Android

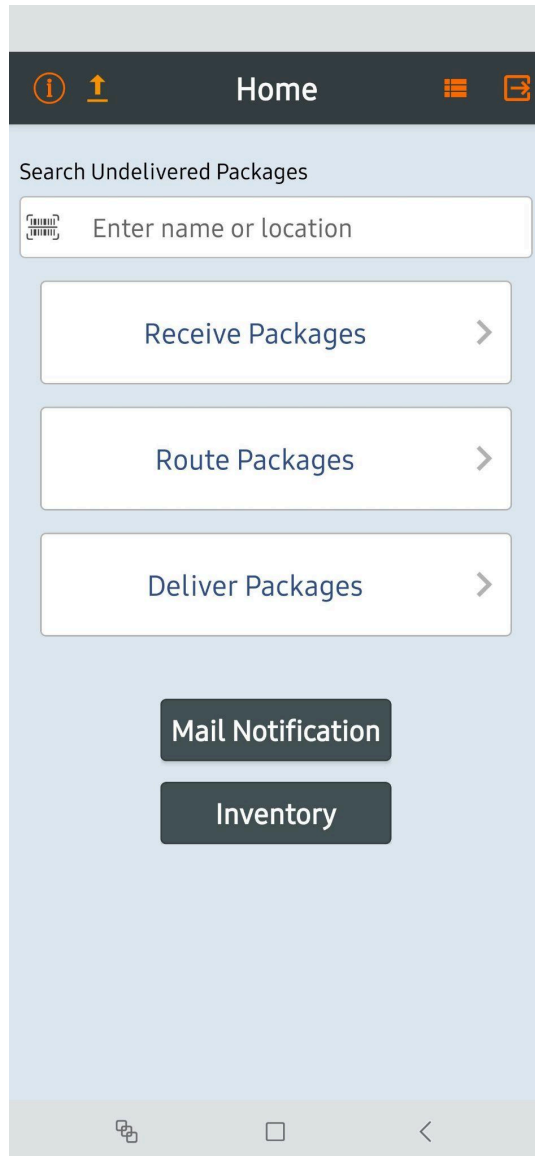

Type	Minimum	Recommended
OS	9.0	11.0 or higher
Camera	15 MP	32 MP or higher
RAM	6 GB	8 GB or higher

For a list of recommended devices, please reach out to the QTrak Customer Success Team or to your account manager.

Using the QTrak Mobile App

Now that you have the QTrak mobile app installed on your Apple or Android device, you're ready to start scanning! When you first boot up the app, you will be met with the log in screen. See the [Logging In](#) section for instructions on how to log in to the mobile application.

Home Screen

The Home screen serves as the main menu for the QTrak mobile app where you can access its different functionalities. Please note that what you see may vary depending on your device and your organization's workflow.

The standard available functions are:

- Receive Packages
- Route Packages
- Deliver Packages
- Search Undelivered Packages
- Inventory

We will cover each of these functionalities in detail below.

Note: The "Inventory" button will only display contact information for QTrak unless QTrak's Inventory module is enabled for your organization. If you are curious about the Inventory module or want the button to be hidden, please contact your account manager.

Note: The "Mail Notification" button shown on the left is part of our Variable Mail workflow, and may not show for you depending on your account settings.

Additionally, on the top bar are buttons for (in order from left to right):

- **Information** - shows the version of QTrak currently installed as well as legal information.
- **Upload Logs** - manually uploads logs from the device that are useful in troubleshooting.
- **Pending Transactions** - shows any transactions that are still waiting to be processed (we'll go into more detail on this below).

- **Log out** - logs you out of the application.

Receive Packages

The Receive function is the most basic function for QTrak and is tied to the Received status. It simply enters the package(s) into the system without attaching it to any particular recipient.

Note: If you want to, you can ignore the Receive function completely in favor of Route, which does the same thing but allows you to attach a contact to the package.

Route Packages

The Route function is very similar to the Receive function, with the main difference being that it allows you to route the package(s) to a specific contact, and is tied to the Routed status. If the After Routing notification is enabled and they have a valid email address associated with them, they will also receive a notification alerting them that they have a package.

Deliver Packages

The Deliver function works in two ways; it allows the user to attempt a delivery, in which case the package's status in QTrak will update to Attempted to reflect as such, or allows the user to successfully deliver the package out to the designated recipient, which will update the package's status to Delivered.

Pending Transactions

If the application does not have a strong or stable enough network connection, either over WiFi or mobile data, it will be unable to send transaction data to the server. If there are pending transactions in the queue, the number will appear on the pending transactions icon.

You can tap on the pending transactions icon to view details about the transactions in the queue. The data will sync automatically when a stable network connection has been re-established, or they can be manually synced by tapping the refresh icon in the upper right corner of the pending transactions screen.

Search Undelivered Packages

The search undelivered function on the Home screen allows the user to search by a recipient's name, location or Contact ID and displays a list of all undelivered letter mail and packages for that recipient. The packages can then be "quick delivered" all at once.

*Note: You cannot deliver individual packages or mail using the search undelivered function. Hitting "Quick Deliver" will deliver **all** pending packages and mail for the recipient.*

Receiving, Routing and Delivering Packages

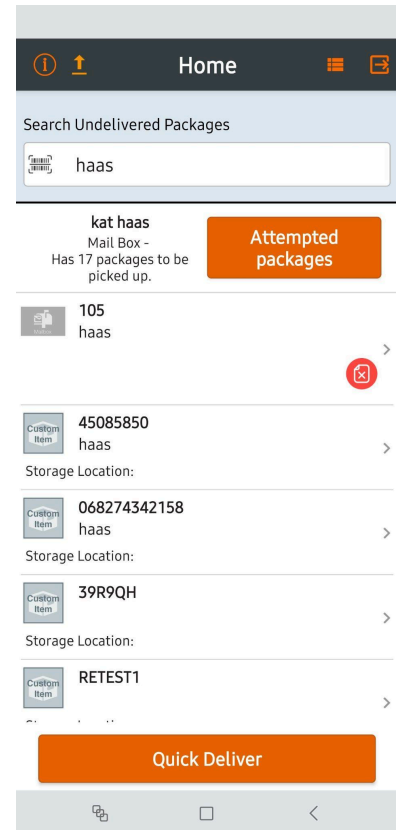

The steps to use each of the primary functions of QTrak are practically identical, and follow the same basic steps.

1. Tap Receive, Route or Deliver.
2. Scan the package(s) using the integrated camera. Make sure the barcode is centered within the guidelines.
3. Tap "Done" when finished.
4. You will be taken to the Package Information overview screen where you can double check the tracking numbers.

This is where the work flow differs slightly depending on which function you are using. For Receive, this is where the workflow ends! You can add any relevant notes, then tap "Receive Packages" to complete the transaction.

For routing:

1. Tap "Route Packages."
2. You will be taken to the Routing Details screen. This is where you enter recipient information, who the package is from, and any notes. You can also add photos for better tracking.
 - a. To add a photo, tap "Add Photo" and then "Take Photo" and use the integrated camera to take a picture of the package(s).
3. Once the information is entered, tap "Route Packages" to complete the transaction.

For delivery:

1. On the Package Information screen, you will see the list of packages that have been scanned for delivery and who they have been routed to, as well as add any relevant notes or take a picture.
 - a. To add a photo, tap "Add Photo" and then "Take Photo" and use the integrated camera to take a picture of the package(s).
2. There are two options for delivery: Get Signature and Attempt
 - a. To deliver out a package:
 - i. Tap "Get Signature," then have the recipient sign on the device screen. Tap "Done."
 - ii. Enter the recipient's last name in the field, then tap "Done" again to complete the transaction.
 1. *Note: It is not necessary to have the recipient sign or enter their last name, but can be helpful for tracking and reporting purposes.*
 - b. To attempt a package delivery:
 - i. Tap "Attempt" then tap "Attempt" again to complete the transaction.

Troubleshooting

This section of the user guide will cover how to troubleshoot some basic problems that users may run into when using the QTrak web portal or mobile app.

In this section:

- [Changing/Resetting Your Password](#)
- [Incorrect Username/Password or User Does Not Exist Error](#)
- [White Screen Error](#)
- [Reports Not Generating](#)

Changing/Resetting Your Password

1. On the log in screen click "Forgot password" on the web or tap "Forgot your password?" on the mobile app.
2. Enter the email address you use to log in to the system (your username).
3. Enter the verification code sent to the entered email address.
4. Set and confirm your new password.

Incorrect Username/Password or User Does Not Exist Error

If you receive either of these errors, please ensure that your username is correct and is entered in all lowercase letters. If your username is correct, reset your password.

White Screen Error

If you get a blank white screen when trying to log in to QTrak, please clear the entire cache/cookies for the browser you are using and try again. This is also the first troubleshooting step for any page on QTrak that doesn't load.

Reports Not Generating

If a report is not generating, either in the Standard or Advanced portals, it may be that the amount of data requested is too large. If a report cannot be run in the Standard portal, try to run it in the Advanced portal. If a report cannot be run in the Advanced portal, try a smaller dataset or reach out to QTrak's Customer Success Team.

If you experience an issue that is not addressed here, please reach out to QTrak's Customer Success Team for assistance.

Revision History

Version	Date	Description
3.0	June 2026	Major UI re-design; major content update.
2.0	October 2024	Major UI re-design; major content update.
1.0	July 2023	Initial version.
