

Asset Pods and Vending

QTrak's Smart Lockers and software are capable of functioning as what is called "Asset Pods" or on standard vending machines. This allows organizations to provide items of various types such as headphones, chargers or other accessories to employees for free or for a fee. Organizations can limit who has access to these items and require an ID card swipe for accurate tracking of assets borrowed or sold.

Setting up Asset Pods

The first step in setting up the vending workflow is logging the items you wish to provide to employees in the QTrak system and then placing the physical items in the Smart Lockers or vending machine. When the "Asset Pod" functionality is enabled, an additional option will show under the "Kiosk Locker" dropdown menu, called "Assets List."

This is where Supervisors in the system may add the items they wish to track. They can include a photo of the asset, a serial number for the asset, and a description of the asset. This page is also where assets may be tracked as they are borrowed or bought. Users can see what locker they are currently stored in, the access code for that locker, and the current status of that item.

Asset Distribution List							
Search name							
Date Received	Asset	Locker Number	Serial Number	Access Code	Asset Description	Status	Action
01/26/2025		110	698583888	199738	Mouse \$50	Vending	Delete
01/08/2025		3	4649	4888	Mouse \$50	Reserved	Delete
01/08/2025		3	4649	4409	Mouse \$50	Reserved	Delete

Assets can be added one by one using the QTrak mobile app or provided to the QTrak team to bulk upload.

Adding Assets on Mobile

To add assets to QTrak and store them in a locker individually, follow these steps:

1. Open the QTrak app and tap "Store Item." This will open the scanning screen, which utilizes the device's built in camera to scan barcodes.
2. Scan the items you wish to vend and confirm the numbers on the next screen. Tap "Store Item."
3. On this screen you may enter the following information:
 - a. Who should be notified that this item has been stored
 - b. What the item is
 - c. Any relevant notes concerning the item
 - d. A photo
4. Once the above information has been entered, tap "Store In Locker."
5. Tap "Vending."
6. Select the locker bank you are storing the item in.
7. On the next screen, select which locker you want to store the item(s) in. If the item is something that will need to be returned, check the box that says "Returnable."
8. Tap "Yes" to store the item(s).
9. Approved employees may then use the provided access code or their ID card to retrieve items.

Reserving Assets

The "Reserve Asset" function can be used to deliver assets to specific employees, such as a replacement laptop, that only that employee has the authority to access. To reserve an item for a specific employees, follow these steps:

1. Open the QTrak app and tap "Store Item." This will open the scanning screen, which utilizes the device's built in camera to scan barcodes.
2. Scan the items you wish to store and confirm the information on the next screen. Tap "Store Item."
3. On this screen you may enter the following information:
 - a. Who should be notified that this item has been stored
 - b. What the item is
 - c. Any relevant notes concerning the item
 - d. A photo
4. Once the above information has been entered, tap "Store In Locker."
5. Tap "Reserve."
6. Select the locker bank you are storing the item in.
7. On the next screen, select which locker you want to store the item(s) in.

To Return An Asset

1. If the item(s) is marked as "returnable," the employee must re-enter or re-scan their ID card.
2. This will display a screen showing all items that are currently available and their information.
3. Tap on the item that is being returned then tap "Return."
4. The locker the item was originally stored in will open. Place the item back in the locker and ensure the door is closed to complete the transaction and make the item available for its next use.
